The conference

ruSMART is the nineteenth in a series of international conferences devoted to the Internet of Things and the smart spaces that surround us. Over three days in Istanbul, researchers, engineers and industry practitioners meet to present new work on how connected systems sense, decide and act — and on the security, energy and data questions that follow once those systems are everywhere.

The 2026 programme brings together 52 accepted papers across ten parallel sessions, six keynote addresses and a closing panel discussion. Eleven papers are presented on site in the Mehmet Akif Ersoy Konferans Salonu; the remaining forty-one are presented online, so that colleagues who cannot travel can still take part.
